## AVANT-PROPOS

L'annuaire pluviométrique de la Tunisie de l'année 2015-2016 est une synthèse des observations pluviométriques relevées sur l'ensemble du réseau pluviométrique national au cours de l'année hydrologique 2015-2016 qui démarre le 1<sup>er</sup> septembre 2015 et s'achève le 31 août 2016.

Il est le fruit d'une collaboration permanente entre les établissements régionaux représentés par les (CRDA) « Commissariat Régional au Développement Agricole » ; et la Direction Générale des Ressources en eau. Dans chaque gouvernorat , existe un CRDA au sein duquel toutes les directions techniques centrales au niveau de ministère sont représentées par des arrondissements. La Direction Générale des Ressources en Eau est représentée à l'échelle régionale par 24 arrondissements de Ressource en eau, ces derniers , parmi leurs taches multiples , ils :

- Gèrent les réseaux de pluviomètres implantés dans les différents gouvernorats et veillent à leur bon état de fonctionnement.
- Collectent les observations et initient les observateurs du réseau pluviométrique à effectuer de bons relevés pluviométriques.
- Constituent les fichiers informatisés et éditent des annuaires pluviométriques régionaux.

Et la Direction des Eaux de Surface par l'intermédiaire de la sous direction d'Hydrologie Analytique et des Bases de Données:

- Assure le rassemblement, la collecte, l'informatisation et la mise en forme de ces données ;
- Prépare, édite et diffuse l'annuaire pluviométrique national ;
- Veille à la mise à jour et la sauvegarde de la banque des données pluviométriques ; composante principale de la base nationale de données sur les Ressources en Eau ;
- Accorde une assistance technique permanente aux arrondissements régionaux pour la bonne gestion du réseau pluviométrique.

## 1.Présentation de l'annuaire

La première partie de cette publication présente une analyse de la pluviosité en Tunisie durant l'année 2015-2016, cette analyse a été faite à l'échelle des gouvernorats et des régions naturelles ; chaque région naturelle regroupe un certain nombre de gouvernorats selon la répartition suivante :

**Nord Ouest** : Jendouba, Béja, Kef et Siliana;  
**Nord Est** : Tunis, Ariana, Ben Arous, Manouba, Nabeul, Zaghouan et Bizerte;  
**Centre Ouest** : Kairouan, Kasserine et Sidi Bouzid;  
**Centre Est** : Sousse, Monastir, Mahdia et Sfax;  
**Sud Ouest** : Gafsa, Tozeur et Kébili;  
**Sud Est** : Gabès, Tataouine et Mednine.

Sur un total de 728 stations pluviométriques observées au cours de l'année 2015-2016, il a été sélectionné 148 stations (à raison de 3 à 7 par gouvernorat ), pour caractériser la situation pluviométrique à l'échelle du pays.

La deuxième partie comprend les relevés pluviométriques journaliers. Ces relevés se présentent sous forme de tableaux annuels par station et sont groupés par bassin et par ordre numérique et alphabétique. Les données pluviométriques ont été saisies et traitées par le logiciel de gestion de données pluviométriques « HYDRACCES », élaboré au Laboratoire d'Hydrologie de l' Institut de Recherche pour le Développement (IRD).

Quant à la critique des données, elle se fait une première fois à la réception du bulletin pluviométrique. ça consiste à comparer les relevés des postes voisins et éliminer toute observation qui semble aberrante. Une deuxième critique se fait à la préparation de l'annuaire par une comparaison des bulletins d'une part avec leur double et d'autre part avec les souches afin de noter les rectifications éventuelles. Les valeurs qui semblent vraies ou acceptables sont reproduites fidèlement telles qu'elles sont sur le bulletin d'observation ; des corrections sont aussi portées sur les relevés décalés d'une journée car quelques fois les observateurs marquent les quantités observées à 7h du matin à la date du jour même au lieu de la date de la veille conformément à la consigne établie.

## 2. Aperçu sommaire sur la pluviosité de l'année 2015-2016

### 2.1. Totaux pluviométriques annuels

Le total pluviométrique de l'année hydrologique 2015-2016 pour l'ensemble du pays est déficitaire.

A l'échelle des grandes régions naturelles, le déficit varie entre 15% au Nord est et 57% au Sud ouest

- Au Nord Ouest, on a enregistré des pluies ( par gouvernorat) variant entre 318 mm au gouvernorat du Siliana et 659mm au gouvernorat de Jendouba ; au niveau de ces deux gouvernorats nous avons relevé respectivement un déficit de 19% et un excédent de 32% par rapport à la moyenne pluviométrique par gouvernorat ;
- Au Nord Est, on a enregistré des pluies (par gouvernorat) variant entre 279 mm au gouvernorat de Zaghouan et 724 mm au gouvernorat de Bizerte ; représentant respectivement un excédent par rapport à la moyenne pluvimétrique par gouvernorat de 98% au gouvernorat de Bizerte et des déficits qui varient entre 29% au gouvernorat deTunis et 35% au gouvernorat de Ben Arous et Nabeul;
- Au Centre Ouest, on a enregistré des pluies (moyenne par gouvernorat) variant entre 139 mm à Sidi Bouzid et 216 mm au gouvernorat de Kairouan , représentant respectivement des déficits de 32% et de 35% par rapport à la moyenne pluviométrique par gouvernorat ;
- Au Centre Est, on a enregistré 268 mm à Monastir, représentant respectivement un déficit de 22% et on a enregistré des pluies de 100 mm au gouvernorat de Sfax représentant un déficit de 53% comparé à la moyenne pluviométrique par gouvernorat ;
- Au Sud Ouest, on a enregistré des pluies (moyenne par gouvernorat) variant entre 20 mm à kebili et 115 mm a Gafsa avec des excédents varient entre 31% au gouvernorat de Gafsa et 86% au gouvernorat de Kebili comparées à la moyenne pluviométrique par gouvernorat ;
- Au Sud Est du pays, on a enregistré des pluies de 71 mm à Tataouine avec un déficit de 30% et 146 mm à Gabes et représente respectivement un déficit de 22% par rapport à la moyenne pluviométrique par gouvernorat .

Comparée à la moyenne interannuelle, la répartition régionale de la pluviométrie pour l'année 2015-2016 se présente comme suit:

**Tableau 1 : Comparaison des pluies régionales à la moyenne**

| REGION       | Superficie ( Km2) | (I)<br>Pluie de l'année 2015-2016 (mm) | (II)<br>Moyenne inter annuelle (mm) | (III)<br>Ecart à la moyenne (mm) | (IV)<br>rapport à la moyenne | (V) = (1-IV)*100<br>Excédent (+) ou Déficit (-) % |

| TUNISIE      | 154922            | 158                                    | 232                                 | -73                              | 0,68                         | -32                                               |

II\*: les moyennes interannuelles pour une période de 50 ans sont pondérées aux surfaces des gouvernorats et des régions naturelles.

## 2.2.Analyse comparative des sept dernières années 2007-2008 à 2015-2016

Le tableau ci-dessous présentant les totaux pluviométriques pour les huit années (2007-2008 à 2015-2016) montre que :

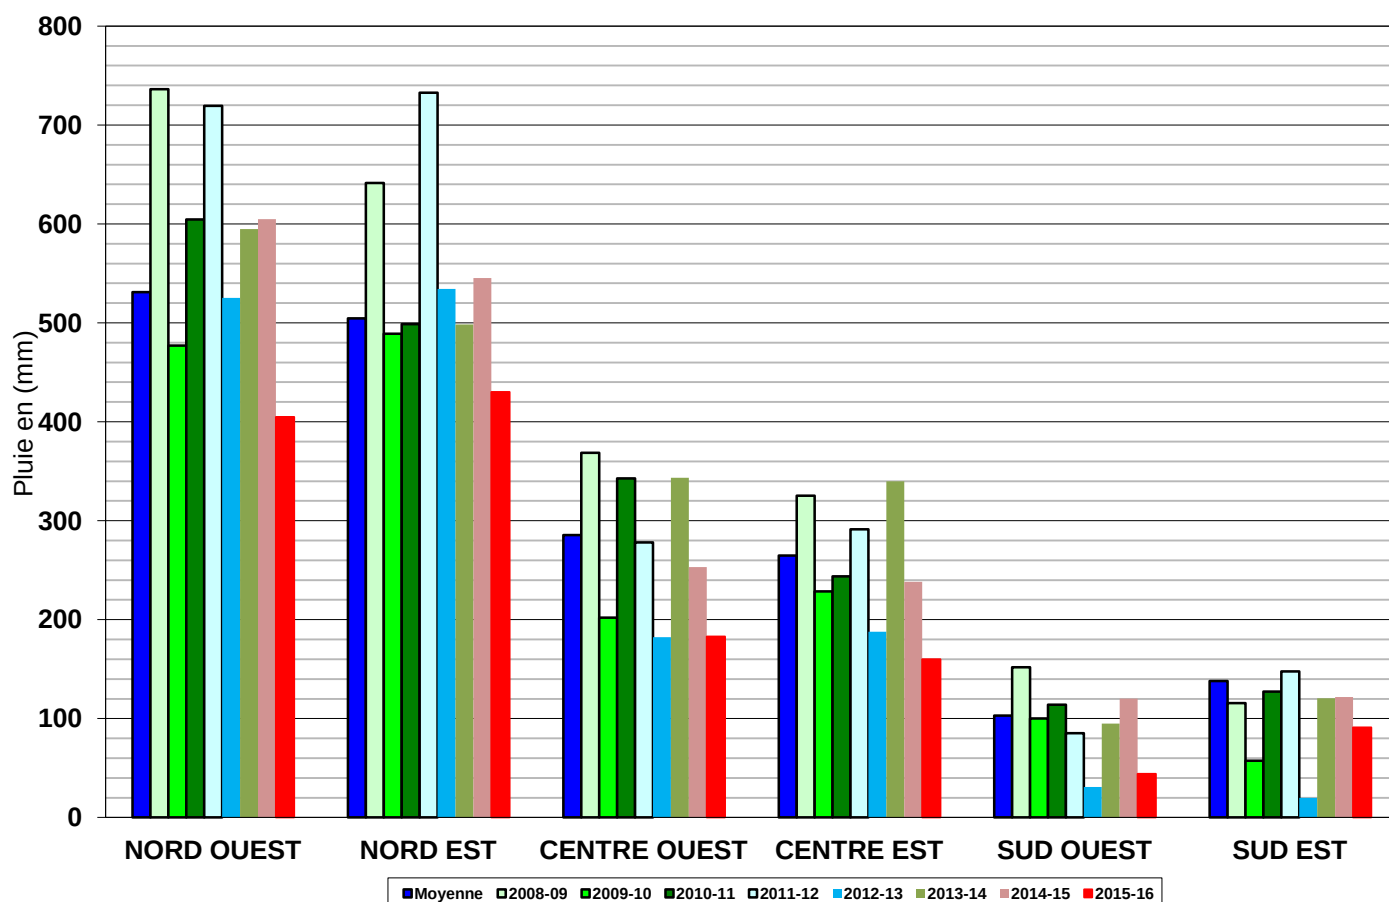

- Pour le Nord Ouest, l'année 2015-2016 est moins pluvieuse que les sept dernières années (2008-2015);
- Pour le Nord Est, l'année 2015-2016 est moins pluvieuse que les sept dernières années (2008-2015);
- Pour le Centre Ouest, l'année 2015-2016 a été plus pluvieuse que l' année 2012-2013 et moins pluvieuse pour les années 2008-2009,200-2010,2010-2011,2011-2012,2013-2014,2014-2015;
- Pour le Centre Est, l'année 2015-2016 est moins pluvieuse que les sept dernières années (2008-2015);
- Pour le Sud Ouest , l'année 2015-2016 a été plus pluvieuse que l' année 2012-2013 et moins pluvieuse pour les années 2008-2009,2009-2010,2010-2011,2011-2012,2013-2014,2014-2015;
- Pour le Sud Est, l'année 2015-2016 est plus pluvieuse que les années2009-2010,2012-2013 et moins pluvieuse pour les années (2008-2009,2010-2011,2011-2012,2013-2014,2014-2015).

**Tableau 2 : Totaux pluviométriques des huit dernières années (2008-2009 à 2015-2016)**

Le graphique ci-dessous illustre bien la situation de l'année 2015-2016 comparée aux sept années précédentes :

**Figure 1 : Comparaison des pluviométries régionales des huit dernières années**

### 2.3. Pluies mensuelles

La distribution mensuelle des pluies du pays, synthétisée dans le tableau suivant montre que les mois : , septembre, novembre et mai sont excédentaires ; les excédents varient entre 12% au mois de septembre et 31% au mois de novembre , pour le reste de l'année les déficits varient entre 28% au mois d' avril et 85% au mois de décembre.

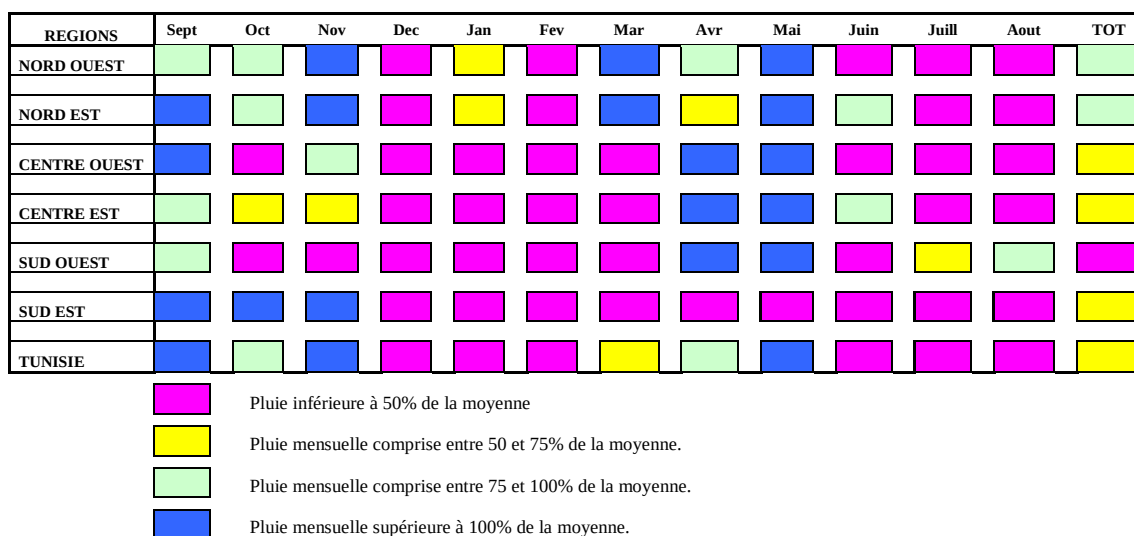

**Tableau 3 : Pluies mensuelles 2015-2016 dans les régions naturelles**

**Figure 2 : Répartition des pluies mensuelles 2015-2016 par classe de pluviométrie**

## 2.4. Pluies saisonnières

A l'échelle saisonnière, la répartition des pluies par région naturelle se présente comme suit:

- L'automne a contribué de 49% au total pluviométrique de l'année sur l'ensemble du pays, sa contribution à l'échelle régionale varie entre 29% au Sud ouest et 85% au Sud Est.
- L'hiver a présenté 16% du total pluviométrique sur l'ensemble du pays, sa contribution à l'échelle régionale varie entre 7% au Centre Ouest et 26% au Nord Est .
- La saison du printemps a contribué de 33% du total pluviométrique annuel, sa contribution régionale varie de 6% au Sud Est à 59% au Sud Ouest.
- La saison estivale a contribué de 3% au total pluviométrique de l'année 2015-16, sa contribution à l'échelle régionale varie de 0% au Sud Est à 5% au Centre Ouest.

A l'échelle des régions naturelles et pour l'année hydrologique 2015-2016 il apparaît que :

- Pour le Nord Ouest, l'apport pluviométrique du printemps prédomine avec 41% de la pluviométrie annuelle suivi par les apports de l'automne avec 36% ; l'hiver avec 20% et l'été de 3%;
- Pour le Nord Est, les apports pluviométriques de l'automne prédomine avec 43% et les apports pluviométriques du printemps ont contribué de 29% à la pluviométrie annuelle suivi enfin par les apports de l'hiver de 26% et de l'été de 2%;
- Pour le Centre Ouest, l'apport pluviométrique de l'automne prédomine avec 44% de la pluviométrie annuelle suivi par les apports de l'hiver avec 7% et de l'été avec 5%;
- Pour le Centre Est, l'apport pluviométrique de l'automne prédomine avec 43% de la pluviométrie annuelle suivi par les apports du printemps avec 39% et, de l'hiver avec 14% et l'été avec 3% ;
- Pour le Sud Ouest, l'apport pluviométrique du printemps prédomine avec 59% de la pluviométrie annuelle suivi par les apports de l'automne avec 29% et de l'hiver avec 8% et de l'été avec 4%.
- Pour le Sud Est l'apport pluviométrique de l'automne prédomine avec 85% de la pluviométrie annuelle suivi par les apports de l'hiver avec 9% et du printemps avec 6% et enfin l'été avec 0% ;
- Pour toute la Tunisie, l'apport pluviométrique de l'automne i prédomine avec 49% de la pluviométrie annuelle 2015-2016 suivi par les saisons de printemps avec 33% et l'hiver avec 16% et l'été avec 3%. (Tableaux pages 25, 26 et 27).

Le tableau suivant présente les cumuls pluviométriques saisonniers par région ainsi que la contribution relative de chaque saison au total annuel.

### 3. Répertoire des stations pluviométriques de la Tunisie

La présente publication reflète toutes les observations pluviométriques journalières, mensuelles et annuelles relevées au niveau de 728 stations pluviométriques réparties à travers tout le pays durant l'année Hydrologique 2015-2016 qui s'étend du 1<sup>er</sup> Septembre 2015 au 31 Août 2016.

La répartition des postes pluviométriques est faite suivant les six régions naturelles :

**Nord Ouest** : Jendouba, Béja, Kef et Siliana;

**Nord Est** : Tunis, Ariana, Ben Arous, Manouba, Nabeul, Zaghouan et Bizerte;

**Centre Ouest** : Kairouan, Kasserine et Sidi Bouzid;

**Centre Est** : Sousse, Monastir, Mahdia et Sfax;

**Sud Ouest** : Gafsa, Tozeur et Kébili;

**Sud Est** : Gabès, Tataouine et Mednine.

A rappeler que le réseau hydrographique de tout le pays est subdivisé en 7 grands bassins portant des numéros de codification allant de 3 à 9, les numéros 1 et 2 affectés aux bassins transfrontières avec le pays voisins se trouvant à l'Ouest du pays, l'Algérie et le numéro 2 affecté aux bassins transfrontières avec le pays voisin au Sud Est, la Libye ;

**Bassin 3:** (Extrême Nord et Ichkeul) :

Extrême Nord de la Tunisie, les zones forestières du Nord-Ouest et la région du lac Ichkeul et de Bizerte sans le bassin de Ghar El Melh.

**Bassin 4:** (Cap-Bon, oued Miliane et Sahel Nord) :

Bassin versant de l'oued Miliane et le Cap-Bon y compris le bassin versant de l'oued El Khairat et oued Rmel et Sahel Nord.

**Bassin 5:** (Medjerda et Ghar El Melh) :

Bassins versants de la Medjerda et de Ghar El Melh.

**Bassin 6:** (Sebkhat Kelbia et Sidi El Hani) :

Bassins versants des Sebkhat El Kalbia et de Sidi El Hani.

**Bassin 7:** (Sahel et Leben) :

Bassins côtiers du Sahel de Sousse et de Sfax et bassin versant de l'oued Leben.

**Bassin 8:** (Chott Gharsa et Sebkhat Noual - Sidi Mansour) :

Bassins versants de Chott El Gharsa et de Sebkhat Noual - Sidi Mansour.

**Bassin 9:** (Sud) :

Bassins de chott Jerid et Fejej, la Djeffara, le Dahar et l'extrême Sud jusqu'aux frontières Algériennes et Libyennes.

A l'intérieur de chaque bassin, les postes pluviométriques sont classés par ordre alphabétique et portent des numéros de codifications composés de dix chiffres dont la signification est la suivante:

- Le premier chiffre indique le continent Africain,

- Les deux premiers chiffres qui suivent indiquent le code du pays (48 pour la Tunisie) d'appartenance de la station.
- Les cinq chiffres suivants indiquent le N° mécanographique de la station avec comme premier chiffre le N° du bassin auquel appartient le poste.
- Les deux derniers chiffres indiquent le gouvernorat dans lequel se trouve le poste pluviométrique.

Les numéros correspondant à chaque gouvernorat sont les suivants :

| Code | Nom Gouvernorat | Code | Nom Gouvernorat |
|------|-----------------|------|-----------------|
| 22   | Jendouba        | 32   | Monastir        |
| 21   | Béja            | 33   | Mahdia          |
| 23   | Le Kef          | 34   | Sfax            |
| 24   | Siliana         | 61   | Gafsa           |
| 17   | Bizerte         | 62   | Tozeur          |
| 11   | Tunis           | 51   | Gabés           |
| 16   | Zaghouan        | 52   | Mednine         |
| 15   | Nabeul          | 63   | Kébili          |
| 42   | Kasserine       | 53   | Tataouine       |
| 43   | Sidi Bouzid     | 12   | Ariana          |
| 41   | Kairouan        | 13   | Ben Arous       |
| 31   | Sousse          | 14   | Mannouba        |

Une liste complète des postes pluviométriques (numéro d'identification et nom de la station avec Latitude, Longitude et Altitude correspondantes), est donnée dans les pages qui suivent

## 4.FICHES PLUVIOMETRIQUES JOURNALIERES

Il s'agit des tableaux des pluies journalières des 728 stations pluviométriques observées au cours de l'année hydrologique 2015-2016. Sur ces tableaux:

- un point ( . ) indique un jour sec,
- un vide indique un relevé absent,
- une couleur grise indique un cumul ultérieur.

Au bas de chaque tableau, nous précisons :

- Les totaux pluviométriques mensuels (complets ou Absent).
- Le nombre de jours de pluie dans l'année avec le rapport en (%) du nombre de jours où la pluie est supérieure à 0 mm, 0.5mm et 10 mm
- La date et la valeur de pluie quotidienne maximale ;
- Le total annuel pour les années complètes ou le total partiel pour les années incomplètes.

Pour l'année 2015-2016 on dénombre 728 stations pluviométriques en service, réparties entre les bassins hydrographiques comme suit:

- 59 postes pluviométriques au bassin n°3, soit 8% du total du réseau ;
- 134 postes pluviométriques au bassin n°4, soit 18% du total du réseau ;
- 154 postes pluviométriques au bassin n°5, soit 21% du total du réseau ;
- 96 postes pluviométriques au bassin n°6, soit 13% du total du réseau ;
- 124 postes pluviométriques au bassin n°7, soit 17% du total du réseau ;
- 65 postes pluviométriques au bassin n°8, soit 9% du total du réseau ;
- 96 postes pluviométriques au bassin n°9, soit 13% du total du réseau ;

Le tableau ci-dessous présente la répartition ainsi que la couverture des postes pluviométriques dans les régions naturelles du pays:

| REGION              | Superficie<br>( Km <sup>2</sup> ) | Nombre<br>de postes<br>pluviométriques | couverture<br>Km <sup>2</sup> /poste | Répartition<br>des postes pluviométriques<br>par région en % |
